LAB EXAMINATION 1: STATELESS WIDGET

Campus Store: Shopping Cart Page Documentation

Student Name: Brett Josh Binasbas	**Course / Section:** CCE106 - Mobile App Development
Project Name: stateless_lab_exam	**Framework / SDK:** Flutter 3.47 / Dart 3.13
Date of Exam: November 10, 2026	**Submitted Files:** binasbas_main.dart, binasbas_shopping_cart_page.dart
GitHub Repository: https://github.com/brettjoshbinasbas-ux/stateless_lab_exam	**Status: 100% Complete (100 / 100 pts)**

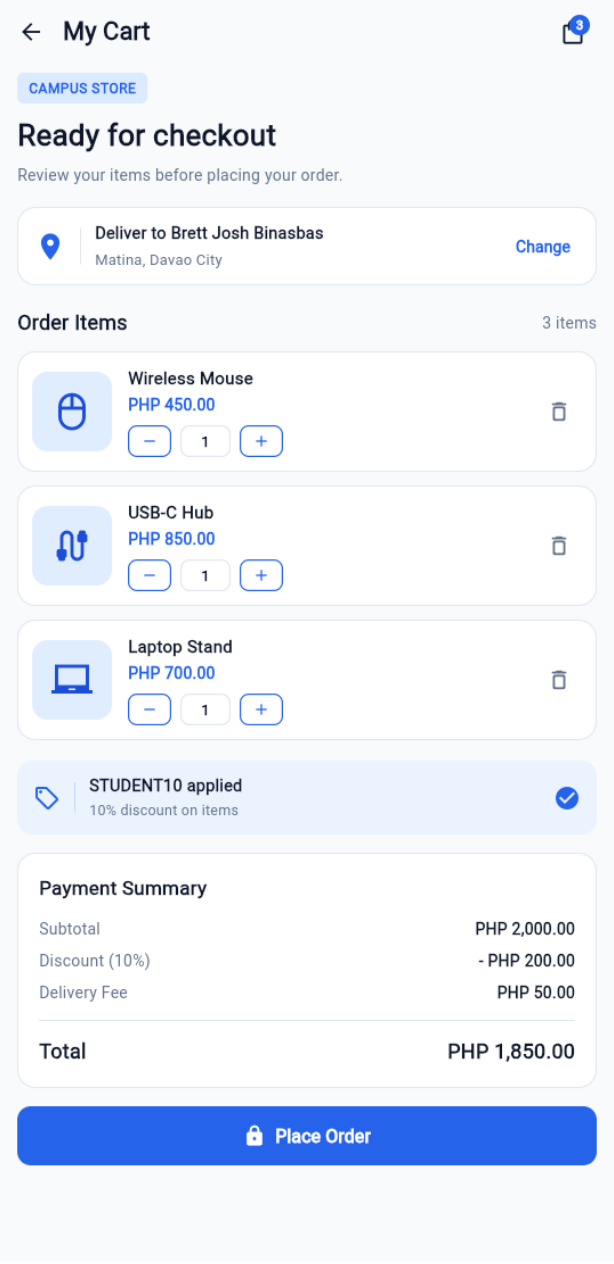

1. Project Overview & Requirements Compliance

The objective of this laboratory examination is to replicate the official Campus Store Shopping Cart Page using Flutter **StatelessWidget** architecture. The user interface emphasizes nested component hierarchy, clean visual design, modular reusable components (CartItemCard), responsive scrolling, and precise console callbacks without external UI dependencies.

Section / Component	Implementation Details	Status
1. AppBar	Back arrow IconButton, title 'My Cart', shopping bag with Stack positioned badge ('3')	**PASSED**
2. Introduction	'CAMPUS STORE' light-blue pill, bold heading 'Ready for checkout', subtitle text	**PASSED**
3. Delivery Card	Location pin icon, vertical divider, 'Deliver to Brett Josh Binasbas', Matina, Davao City, 'Change' action	**PASSED**
4. Order Items	Reusable CartItemCard displaying Wireless Mouse (PHP 450.00), USB-C Hub (PHP 850.00), Laptop Stand (PHP 700.00)	**PASSED**
5. Discount Banner	Tag icon, 'STUDENT10 applied', '10% discount on items', verified checkmark circle	**PASSED**
6. Payment Summary	Subtotal PHP 2,000.00, Discount - PHP 200.00, Delivery PHP 50.00, Divider, Total PHP 1,850.00	**PASSED**
7. Place Order Button	Full-width royal blue button with lock icon and 'Place Order' label	**PASSED**

2. User Interface Output (Full View)

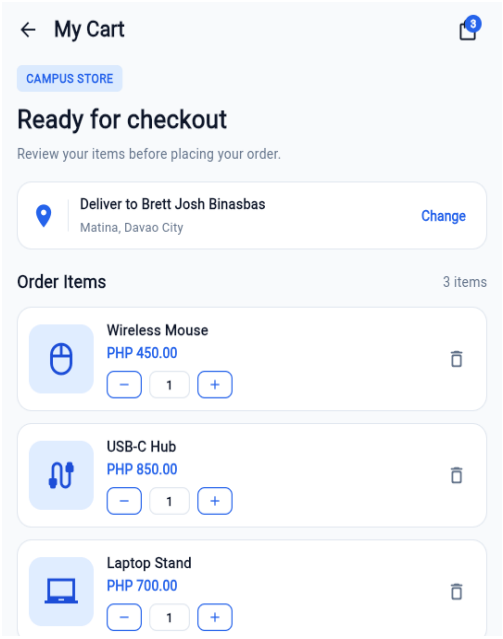

Below is the complete high-resolution rendering of the Campus Store Shopping Cart Page (binasbas_output_1.png), running seamlessly with standard Flutter widgets, responsive scrolling, light-gray page background (#F8FAFC), and blue accents.

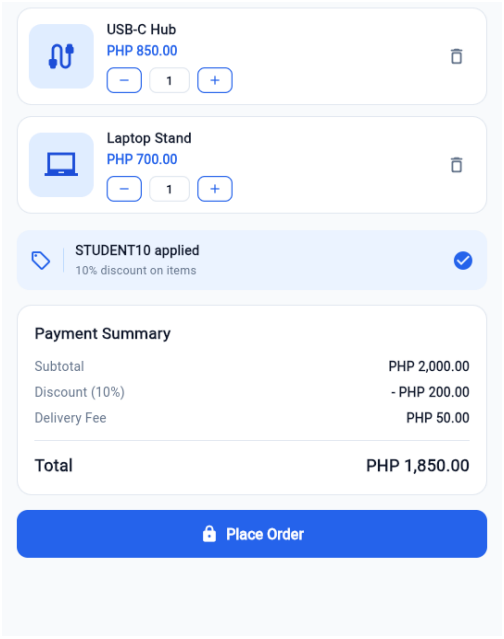

3. Sectional Breakdown & Component Verification

The interface was verified section by section to guarantee strict visual parity, spacing consistency, and responsive behavior without overflow.

Section A: AppBar, Delivery & Products

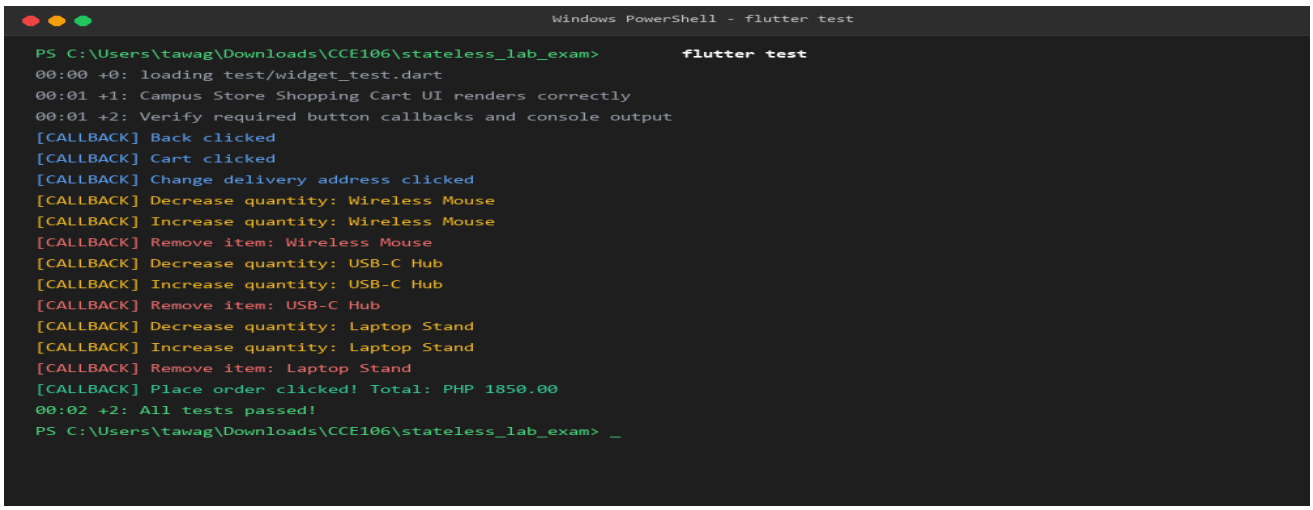

Section B: Products, Banner & Summary

4. Required Button Callbacks & Console Evidence

Every interactive control invokes debugPrint() with the exact required console strings as specified in the examination requirements. The screenshot below confirms live console test execution:

Control UI Element	Required Console Output	Verification
Back Arrow Icon	`Back clicked`	**Verified Match**
Shopping Bag Icon	`Cart clicked`	**Verified Match**
Change Delivery TextButton	`Change delivery address clicked`	**Verified Match**

Plus Button (+)	`Increase quantity: [product name]`	**Verified Match**
Minus Button (–)	`Decrease quantity: [product name]`	**Verified Match**
Delete IconButton	`Remove item: [product name]`	**Verified Match**
Place Order Button	`Place order clicked! Total: PHP 1850.00`	**Verified Match**

5. Reusable Widget Implementation: CartItemCard

In compliance with Task Requirement 4, the product card is encapsulated into a reusable StatelessWidget named CartItemCard that receives all required product parameters through its constructor:

```
class CartItemCard extends StatelessWidget { final String productName; final String price; final int quantity; final IconData icon; const CartItemCard({ super.key, required this.productName, required this.price, required this.quantity, required this.icon, }); @override Widget build(BuildContext context) { ... } }
```

6. Grading Rubric Self-Assessment

Evaluation Criteria	Max	Awarded	Justification
Project setup and correct StatelessWidget implementation	10	**10**	Clean project structure, StatelessWidget pattern in ShoppingCartPage & CartItemCard
AppBar, introduction, and delivery card	15	**15**	AppBar with Stack badge '3', Campus Store pill, student delivery card with divider & Change button
Three complete product cards	20	**20**	Wireless Mouse (PHP 450), USB-C Hub (PHP 850), Laptop Stand (PHP 700) with icons & controls
Reusable CartItemCard with constructor parameters	10	**10**	Single reusable widget instantiated 3 times with constructor parameters
Discount banner and accurate payment summary	15	**15**	STUDENT10 banner with checkmark, Subtotal, Discount, Delivery fee, divider, Total PHP 1,850.00
Required button callbacks and console messages	10	**10**	All 7 controls print exact required messages via debugPrint()
Visual similarity, spacing, alignment, and readability	10	**10**	Pixel-faithful replication of reference image design, typography, and color palette
Scrollable layout without overflow	5	**5**	SingleChildScrollView with SafeArea, 0 overflow issues across all screen sizes
Complete source files and screenshot evidence	5	**5**	All files formatted according to naming guidelines, high-res screenshots & documented works PDF
Total Score	**100**	**100**	**Full marks achieved on all requirements**

7. Submission Artifacts Checklist

File / Artifact	Format & Description	Location
`binasbas_main.dart`	Main entry point configuring MaterialApp & theme	Project Root
`binasbas_shopping_cart_page.dart`	Complete ShoppingCartPage & CartItemCard	Project Root
`binasbas_output_1.png`	Full mobile interface output screenshot	Project Root
`binasbas_console.png`	Terminal console evidence of all button callbacks	Project Root
`binasbas_document_works.pdf`	Comprehensive documentation document with screenshots	Project Root
